

Problem solving software engineer with 10 years experience in the design industry, proficient in taking products from concept to production. Talent includes full-stack web development and exceptional client communication skill

TECHNOLOGIES

Languages | Javascript, TypeScript, Python, SQL

Frameworks & Libraries | React, Redux, Express, Motion, Three JS

Databases & Tools | PostgreSQL, Firebase, HTML, CSS, AWS Lambda, Material UI, Git, Github, Cursor

Tools & Softwares | Figma, Storyblok, Adobe Creative Suites (Photoshop, Illustrator, Premier Pro)

WORK EXPERIENCE

Frontend Software Engineer | New York Life Insurance | New York, NY

2024 March - Present

- Refactored frontend data loading from a monolithic API to domain-specific endpoints, implementing Redux thunks for parallel fetching, partial state updates, and targeted refreshes that reduced unnecessary data reloads and improved application performance.
- Developed an advisor notification system that surfaces missing and inconsistent client data by integrating backend alert APIs with Storyblok CMS-driven messaging, Redux state management, configurable notification UI, and deep-link navigation into profile, assets, income, and protection workflows.
- Built a **reusable Motion animation library** using Motion for React, creating shared animation presets, feature-flagged rollouts, and AnimatePresence-based transitions that standardized interactions across tooltips, data cards, accordions, and other shared UI components.
- Integrated **Storyblok headless CMS** into a React application by mapping CMS content models to reusable components and delivering dynamic help panels, calculators, modals, and route-driven content with preview support for non-technical content authors.
- Collaborated closely with product managers, designers, backend engineers, and QA throughout feature development, translating product requirements into scalable frontend solutions and delivering production-ready functionality.

Footwear Designer | United Footwear Group | New York, NY

2019 - 2024

PROJECTS

Between Lights: Fullstack eyewear e-commerce app [Github](#) | [Website](#)

- Built a full-stack e-commerce platform using **React 19, Redux Toolkit, Express.js, and PostgreSQL**, featuring product catalog browsing, shopping cart, user authentication, account management, and Stripe Checkout with webhook-driven order fulfillment.
- Developed an interactive **3D product customization** experience using **React Three Fiber** and **Drei**, enabling real-time material color customization on GLB models and generating canvas snapshots for cart previews.
- Designed scalable frontend architecture with Redux Toolkit, redux-persist, and **JWT-based authentication** while optimizing rendering performance through memoization, efficient catalog filtering, and 3D asset management.
- Integrated **Airtable** into an admin dashboard, synchronizing customer, order, and inventory data from a PostgreSQL backend via the Airtable API to streamline operational workflows.
- Led a responsive redesign across 15+ components, implementing consistent breakpoints, mobile-first navigation patterns, and accessible UI interactions while preserving the desktop experience.

Fuzzle: Dog breed DNA quiz Application [Github](#) | [Website](#)

- Engineered a responsive single-page application using **React**, implementing client-side routing, asynchronous REST API integration, and dynamic quiz flows for an interactive user experience.
- Improved frontend performance through route-based code splitting with **React.lazy** and **Suspense**, session-based persistence to prevent duplicate quiz questions, and optimized production builds with Webpack.
- Developed an **Express.js** and **PostgreSQL** backend with **Sequelize ORM**, designing relational data models and REST APIs while curating real-world dog DNA data from the Reddit r/DoggyDNA community to improve quiz accuracy.

- Integrated third-party APIs and services, including **Formspree** for contact workflows and the **Petfinder API** for adoption resources, and deployed the application on Railway.

Chef's Kiss: Alexa Integrated Kitchen Helper Application [Github](#) | Team Project

- Developed a React and TypeScript frontend for an Alexa-enabled kitchen assistant, emphasizing reusable components and responsive user interfaces.
 - Built REST APIs with Express, PostgreSQL, Sequelize, and Firebase, and integrated Alexa Skills through AWS Lambda to enable voice-driven interactions.
 - Helped define the product MVP and collaborated in an Agile Scrum environment to deliver features iteratively.
-

EDUCATION

FullStack Academy Software Engineering Bootcamp | Software Engineering / Web development

School of Art Institute of Chicago | MA in Art & Design

Rhode Island School of Design | Bachelor of Apparel Design
